## CBSE TEST PAPER-01

MATHEMATICS (Class-10)

Chapter: Triangles

1. In $\Delta P Q R$, given that $S$ is a point on $P Q$ such that $S T \| Q R$ and $P S / S Q=3 / 5$ If $P R=5.6 \mathrm{~cm}$, then find PT.
2. In $\triangle A B C, A E$ is the external bisector of $\angle A$, meeting $B C$ produced at $E$. If $A B=10 \mathrm{~cm}, A C=6 \mathrm{~cm}$ and $B C=12 \mathrm{~cm}$, then find $C E$.
3. $P$ and $Q$ are points on sides $A B$ and $A C$ respectively, of $\triangle A B C$. If $A P=3 \mathrm{~cm}, P B=6 \mathrm{~cm}, A Q=5 \mathrm{~cm}$ and $Q C=10 \mathrm{~cm}$, show that $B C=3 P Q$.
4. The image of a tree on the film of a camera is of length 35 mm , the distance from the lens to the film is 42 mm and the distance from the lens to the tree is 6 m . How tall is the portion of the tree being photographed?
5. $D$ is the midpoint of the side $B C$ of $\triangle A B C$. If $P$ and $Q$ are points on $A B$ and on $A C$ such that $D P$ bisects $\angle B D A$ and $D Q$ bisects $\angle A D C$, then prove that $P Q \| B C$.
6. If a straight line is drawn parallel to one side of a triangle intersecting the other two sides, then it divides the two sides in the same ratio.
7. If a straight line divides any two sides of a triangle in the same ratio, then the line must be parallel to the third side.
8. $A B C D$ is a quadrilateral with $A B=A D$. If $A E$ and $A F$ are internal bisectors of $\angle B A C$ and $\angle D A C$ respectively, then prove that $E F \| B D$. In a $\triangle A B C, D$ and $E$ are points on $A B$ and $A C$ respectively such that $A D / D B=A E C / E C$ and $\angle A D E=\angle D E A$. Prove that $\triangle A B C$ is isosceles.
9. In a $\triangle A B C$, points $D, E$ and $F$ are taken on the sides $A B, B C$ and $C A$ respectively such that $D E$ $\| A C$ and $F E \| A B$.
10. The internal bisector of $\angle A$ of $\triangle A B C$ meets $B C$ at $D$ and the external bisector of $<A$ meets $B C$ produced at $E$. Prove that $\mathrm{BD} / B E=C D / C E$
11. If a perpendicular is drawn from the vertex of a right angled triangle to its hypotenuse, then the triangles on each side of the perpendicular are similar to the whole triangle.
12. A man sees the top of a tower in a mirror which is at a distance of 87.6 m from the tower. The mirror is on the ground, facing upward. The man is 0.4 m away from the mirror, and the distance of his eye level from the ground is 1.5 m . How tall is the tower? (The foot of man, the mirror and the foot of the tower lie along a straight line).
