## Class IX

## EXPERIMENT No: 4

www.jsuniltutorial.weebly.com/
AIM: To observe and compare pressure exerted by a solid iron cuboid on fine sand/ wheat flour while resting on its three different faces and to calculate the pressure exerted in the three different cases.

APPRATUS/ MATERIALS REQUIRED: Spring balance, cuboid, tray to hold sand, sand, scale

## PROCEDURE:

1. With the help of spring balance find the mass of the cuboid. Take three observations and find the mean value. Calculate weight $=\mathrm{mg}\left(\mathrm{g}=9.8 \mathrm{~m} / \mathrm{s}^{2}\right)$
2. Find the length (I), breadth (b) and height (h) of the cuboid by taking three observations of each and then taking their mean.
3. Mark three pairs of opposite surfaces as $S_{1}, S_{2}$ and $S_{3}$ as shown in the figure.
4. Calculate the surface areas as $S_{1}=\mathrm{lh} ; \mathrm{S}_{2}=\mathrm{bh} ; \mathrm{S}_{3}=\mathrm{lb}$
5. Place the tray on the horizontal surface, put 2 inch thick layer of sand in it and flatten the surface of the sand.
6. Gently place the cuboid vertically on the sand such that the surface $S_{1}$ is on the sand.
7. Remove the cuboid and using the scale find the depth of the depression caused and record it. Repeat it two times after flattening the surface and take the mean. Record this mean as $d_{1}$.
8. Repeat the steps 6 and 7 so that surface $S_{2}$ and $S_{3}$ are on the surface of the loose sand. Record the depths of depression as $\mathrm{d}_{2}$ and $\mathrm{d}_{3}$.
9. Calculate the pressures $P_{1}, P_{2}$ and $P_{3}$ for the surfaces $S_{1}, S_{2}$ and $S_{3}$ respectively by dividing the weight of the cuboid by the surface areas of contact.
10. Compare the calculated values of pressures and depths.

## Observations:

1. For mass of cuboid

Observation 1 : $\mathrm{m}_{1}=$
Observation 2 : $\mathrm{m}_{2}=$
Observation 3 : $m_{3}=$
Mean value of the mass, $m=\left(m_{1}+m_{2}+m_{3}\right) / 3=$ g

Weight of the cuboid, $\mathrm{W}=\mathrm{mg}$
2. For dimensions of the cuboid

| Observation No. | Length (I) | Breadth (b) | Height (h) |
| :---: | :--- | :--- | :--- |
| 1 | $\mathrm{l}_{1}=$ | $\mathrm{b}_{1}=$ | $\mathrm{h}_{1}=$ |
| 2 | $\mathrm{I}_{2}=$ | $\mathrm{b}_{2}=$ | $\mathrm{h}_{2}=$ |
| 3 | $\mathrm{I}_{3}=$ | $\mathrm{b}_{3}=$ | $\mathrm{h}_{3}=$ |
| Mean | $\mathrm{I}=\left(\mathrm{l}_{1}+\mathrm{l}_{2}+\mathrm{l}_{3}\right) / 3$ | $\frac{\mathrm{~b}=\left(\mathrm{b}_{1}+\mathrm{b}_{2}+\mathrm{b}_{3}\right)}{3}$ | $\mathrm{~h}=\left(\mathrm{h}_{1}+\mathrm{h}_{2}+\mathrm{h}_{3}\right) / 3$ |

Calculation of surface area and pressure : www.jsuniltutorial.weebly.com/
$S_{1}=\operatorname{lh} \quad ; \quad P_{1}=W / S_{1}=\ldots \ldots .$.
$S_{2}=b h \quad ; \quad P_{2}=W / S_{2}=\ldots \ldots$.
$S \quad P$
${ }^{3}=\mathrm{lb} \quad ; \quad{ }^{3}=\mathrm{W} / \mathrm{S}_{3}=$ $\qquad$
4. For depression caused in the sand

| S. | Surface | Depth of Depression Caused |  | Mean <br> No. |  | Corresponding <br> pressures |
| :---: | :--- | :---: | :---: | :---: | :---: | :--- |
|  | Observation I | Observation II | $=$ |  |  |  |
| 2. | For Sueface $S_{1}$ <br> $(\mathrm{I} \times \mathrm{h})$ | $\mathrm{d}_{1}$ | $\mathrm{~d}_{1}$ | $\mathrm{~d}_{1}$ | $\mathrm{p}_{1}$ | $=$ |
| For Surface $\mathrm{S}_{2}$ <br> $(\mathrm{~b} \times \mathrm{h})$ | $\mathrm{d}_{2}$ | $\mathrm{~d}_{2}$ | $\mathrm{~d}_{2}$ | $\mathrm{p}_{2}$ | $=$ |  |
| 3. | For Surface $\mathrm{S}_{3}$ <br> $(\mathrm{I} \times \mathrm{b})$ | $\mathrm{d}_{3}$ | $\mathrm{~d}_{3}$ | $\mathrm{~d}_{3}$ | $\mathrm{p}_{3}=$ |  |

## Inference :

We have seen that the depth for surface $\qquad$ is maximum and for surface
$\qquad$ is minimum.

Therefore, it is concluded that as the area of the bottom surface decreases the pressure on the sand increases.

## PRECAUTIONS:

1. The sand should be leveled properly after every reading.
2. The block should be placed on the sand very gently, without applying any extra pressure.
3. The block has to be placed vertically.
4. The scale while measuring the depression should just touch the bottom of the depression.
5. The dimensions of the cuboid should be uniform.
